

# Function Generator

Experimental verification using the ADALM2000 (M2K) and Scopy

## Purpose

Generate and observe three basic W1 outputs: a DC level, a sine wave, and a square/pulse waveform.

## Physical setup

**Connection:** W1 was connected directly to oscilloscope Channel 1 positive input (1+), and GND was connected to Channel 1 negative input (1-). No circuit elements were used for this verification.

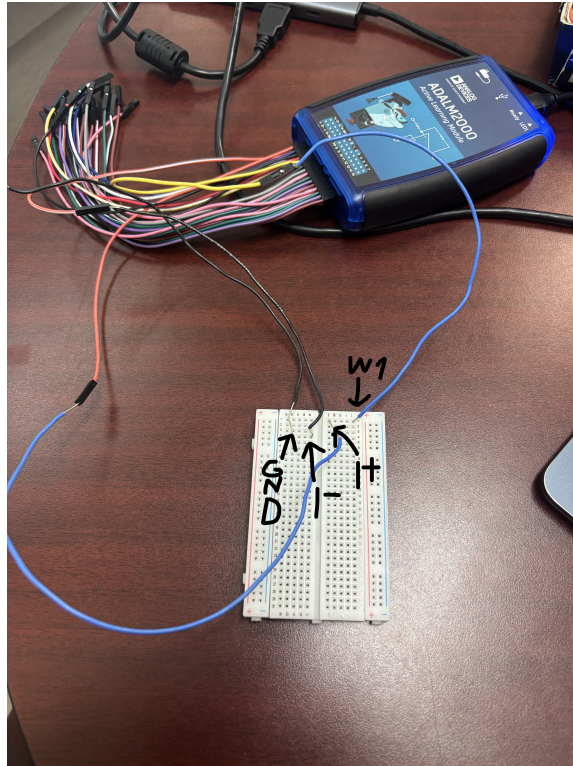

Figure 1. Labeled physical wiring photograph: W1 → 1+ and GND → 1-.

# Scope evidence

Each capture below shows the waveform displayed in Scopy after the signal generator output was connected to Channel 1.

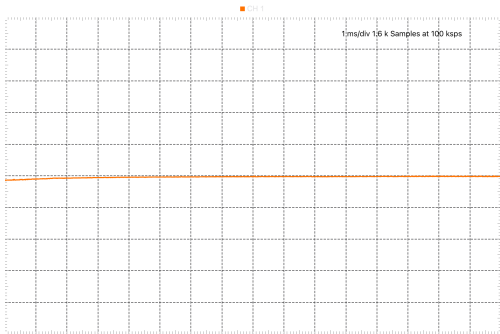

Figure 2. DC / constant output observed on the oscilloscope.

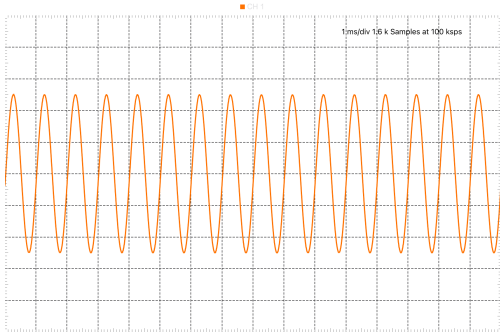

Figure 3. Sine-wave output observed on the oscilloscope.

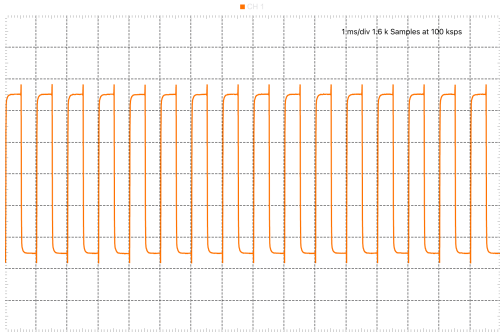

Figure 4. Square/pulse output observed on the oscilloscope.
